**4. Display or use the email of a user
to whom you are transferring data 📩**

3 new tags are available for push data transfer:
`##_recipient_email##`
`##_recipient_first_name##`
`##_recipient_last_name##`

Use case 1: to display the surname, first name and email address of the user to whom the data has been transferred to in a personalised report.

Use case 2: use the email address of the user to whom the data has been transferred in your email scenarios.
